

Janet de Merode, PhD

Adjunct Faculty - Media Psychology at Fielding Graduate University

GMT, , PT

International Psychology, Media and Social Advocacy expert

Janet de Merode brings over 25 years of experience working on problems of poverty in Africa and Asia to her current teaching and research in psychology. Of particular interest to her are methods to improve access of needy populations to health services and education. She formerly served as Director of the Population, Health and Nutrition Research Department of the World Bank; and prior to that, led teams responsible for public health and education investment in West Africa, from village to tertiary level. She has also worked on teams addressing pollution and clean power in China, promoting agro-industries development in India, and food security in Indonesia.

Educated at Northwestern and Johns Hopkins Universities, Janet worked briefly in daily print journalism before joining the World Bank as a microeconomist. After working in over 20 low-income countries, she became convinced that health and social justice—particularly of poor and disenfranchised populations—was underserved in public policy and research agendas, and that the new media technologies could bring innovative approaches. For example, she founded an internet-based company facilitating bulk procurement services for buyers and suppliers of basic medicines in developing countries.

Janet holds a PhD in psychology from Fielding Graduate University, with a concentration in media psychology, i.e., the impact of media on human behavior. She continues to serve as a consultant to various UN agencies and nonprofits working to address poverty and improve public health. From 2011–2013, she was Lead Faculty helping to create a PhD program in International Psychology at The Chicago School for Professional Psychology, Washington, DC campus. There she taught and mentored doctoral students in contemporary issues of mental health around the globe.

Janet is currently an APA Health Disparities Ambassador, and earlier served as a Behavioral and Social Science Volunteer for the CDC/APA Socioeconomic Status Related Cancer Disparities Program in the United States.

In addition to the use of technology and the Web 2.0 for social advocacy, Janet's research interests include biculturalism, the lives of emigrants, sequelae of refugee children, and cross-cultural perspectives on ethics and health.

Janet is a dual citizen of the United States and Belgium, and lives in Washington, DC.

Education/Learning, Mental Health Care, Health and Wellness, Media Production, Research, Writing and Editing, Training and Development, Program Development
